

Keeping you **covered** with ...

HAY **Ratch.e.tarp®**

The Hay Ratch.e.tarp is a sleeved cover with webbing inserted and uses ratchets at each end of the cover allowing the installer to tension the cover securely. The installation can be completed in a few minutes; a centre tie-down may be required depending on the situation of the hay in regards to prevailing winds. This is easily and effectively done by tying down the webbing through a central cut-out to a nearby bale tie.

POLYTEX

TARPAULINS
